

Power WHERE you need it

Whether you are plugged in directly to a 120V power outlet at the dock, at home or while using it to charge from your primary motor while on the run, the CHARGE system replenishes your entire battery bank – including the 12V cranking battery and up to three auxiliary batteries – all at once. This 500-watt power station delivers up to 40 amps of charging power to the cranking battery and up to 25 amps to the trolling batteries and works with multiple battery types including lead acid, AGM, GEL, lithium or TIPL. With the C-Monster app, you're able to monitor your battery status in real-time and prioritize either the trolling or cranking batteries when recharging.
